On the following pages we present our work, both past and present.

Our main focus is on building new instruments and conscientious restoration of old organs. However, we also provide an expert tuning and troubleshooting service based on signed yearly maintenance contracts. Please understand that we do it on a very limited basis, as we firmly believe in quality, not quantity. Our typical service visit will give you a full day of undivided attention just for your instrument. The churches that we service know the difference and they really appreciate it. If you would like us to become your organ servicing company, please contact us for a free estimate and contract conditions.

To see a video of the organ at FPC, Greenville, please see the following YouTube link. The performer is *Cristiano Rizzotto*, organist and

pianist, a native of Brazil currently studying at the East Carolina University.
